

## **Why Horsepower Harley-Davidson Should be Your Choice for EFI Tuning**

---

Horsepower Harley-Davidson has the latest in DynoJet® and WinPEP 7 Technology, the latest training, and knowledge of the Screamin' Eagle® EFI Race Tuner with O2 Sensor Data!

It's not just a download with a couple of 100% Throttle Position runs that make up a tune.

Here at Horsepower Harley-Davidson, we adjust and synchronize the Volumetric Efficiency (VE) tables to your new engine configuration. We use and adjust all 13 tables in the EFI Tuner Software, if necessary, to eliminate decel popping, detonation (pinging), acceleration, and of course, Air Fuel Ratio (AFR) and timing tables for *optimum performance*.

Horsepower Harley-Davidson spared no cost to equip our technicians with the latest equipment and training to bring them to the "*next level*" to service your tuning needs.

It's a long, painstaking process to completely remap your fuel injection system correctly...

*but, when it's done right,*

your bike will run cooler and smoother with more power throughout the complete RPM range, not just at 100% Throttle Position.

A map is made just for your engine configuration and exhaust system – it is a complete custom map that is "*finger printed*" to your bike alone. Each and every Harley-Davidson engine has its own personality and characteristics, and needs its own EFI map to let it run at optimum performance.

*Experience* what a custom made map from Horsepower Harley-Davidson's Service Department feels like. Let us assure you that your investment and experience with our tuning ability will not be disappointing...

You will be impressed!!
